Response to Request for Information

Trial CT-2026-000789 · SynthPharma AG · 12 October 2026

R1. The 50 mg dose gives exposure within the range that was well tolerated in Phase 1 (study WD-101) and is predicted to achieve target receptor occupancy.

R2. Treatment will be stopped if ALT or AST exceeds 3 times the upper limit of normal; the protocol has been amended accordingly (version 1.1).

R3. 18-month real-time and 6-month accelerated stability data are provided and support the proposed 24-month shelf life.
